Site Analysis

Site Analysis

The perception is strong of areas characterized by artisanal shoe shops, shoe factories, logistics companies, hardware stores, office buildings, etc., typically associated with industrial zones.

With the progress of industrial clustering, the relocation of major corporations to the metropolitan area, and the irregular residential growth, the space has transformed into a mixed area with a blend of small businesses and residential developments.

With the rise of the coffee shop trend, cultural complex spaces like Esfactory and Seongsu Federation have emerged. The increase in designer brand showrooms and offices is notable as well.

Site Analysis

Concept

Culture

In modern society, culture has evolved into an inclusive concept encompassing various activities such as enjoying food, taking photos, doing office work, shopping, and playing games in everyday life. We can define culture as a space where these diverse activities converge.

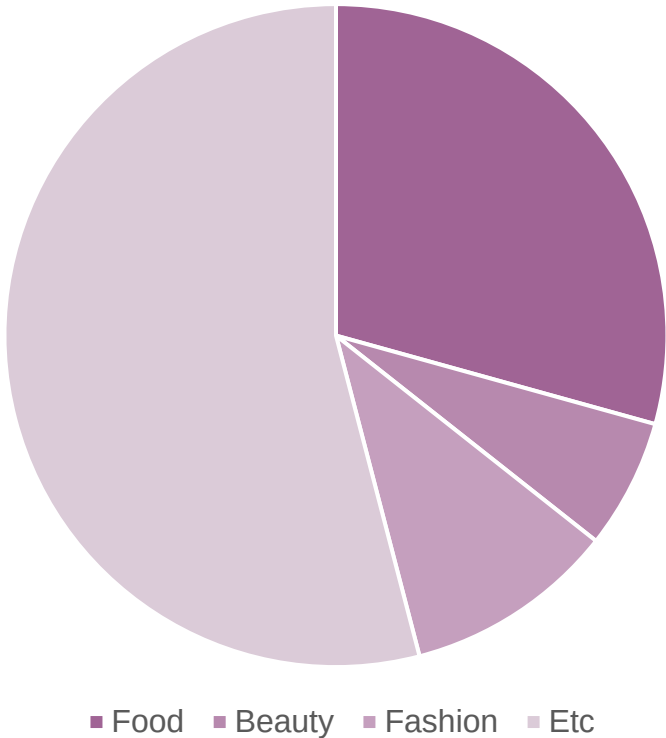

Complex

This term indicates the combination of multiple elements. The term "complex facility" refers to a space where various functions and uses are integrated within a single building or complex.

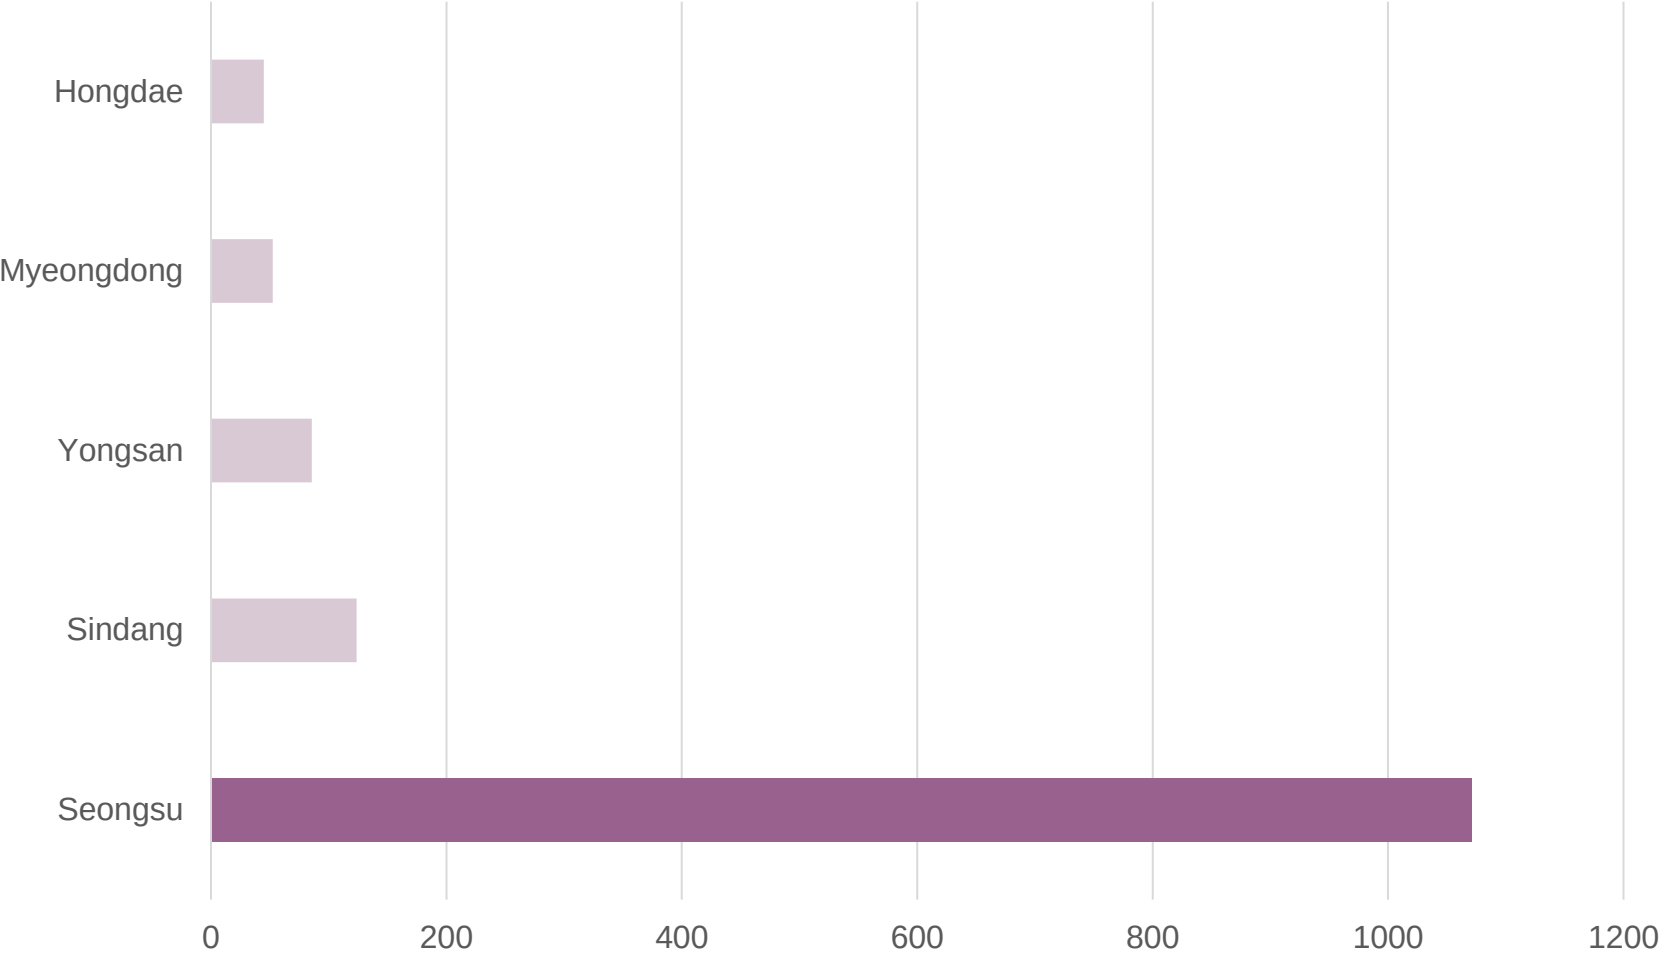

Concept

But these days Seongsu-dong...

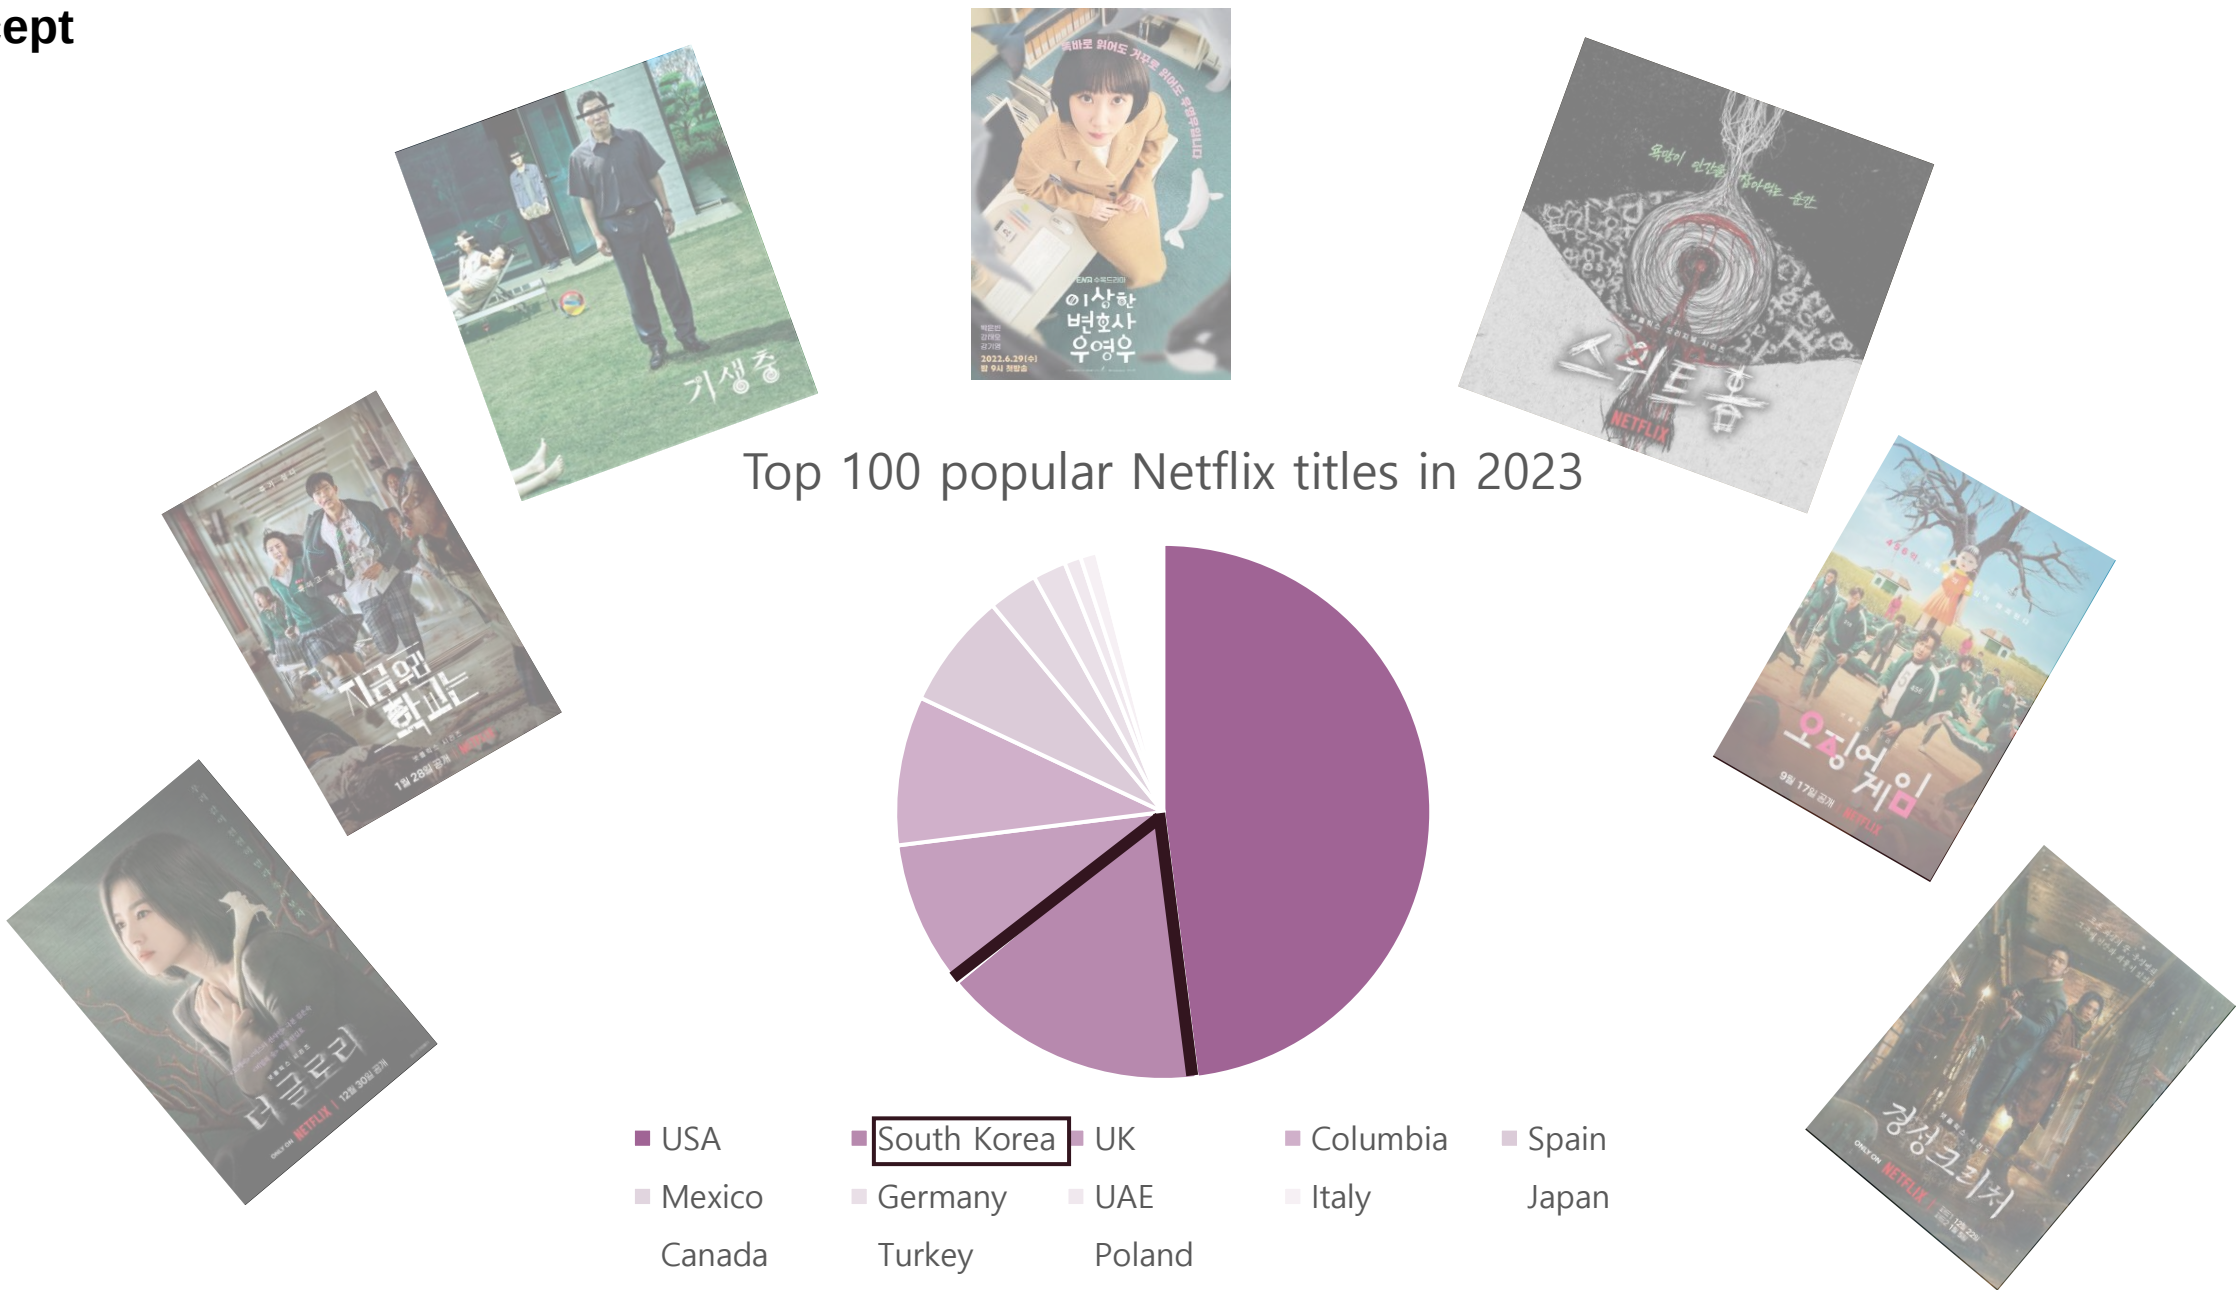

Seongsu-dong commercial district

Commercial district-wise foreign payment growth H1 2023
compared to previous year

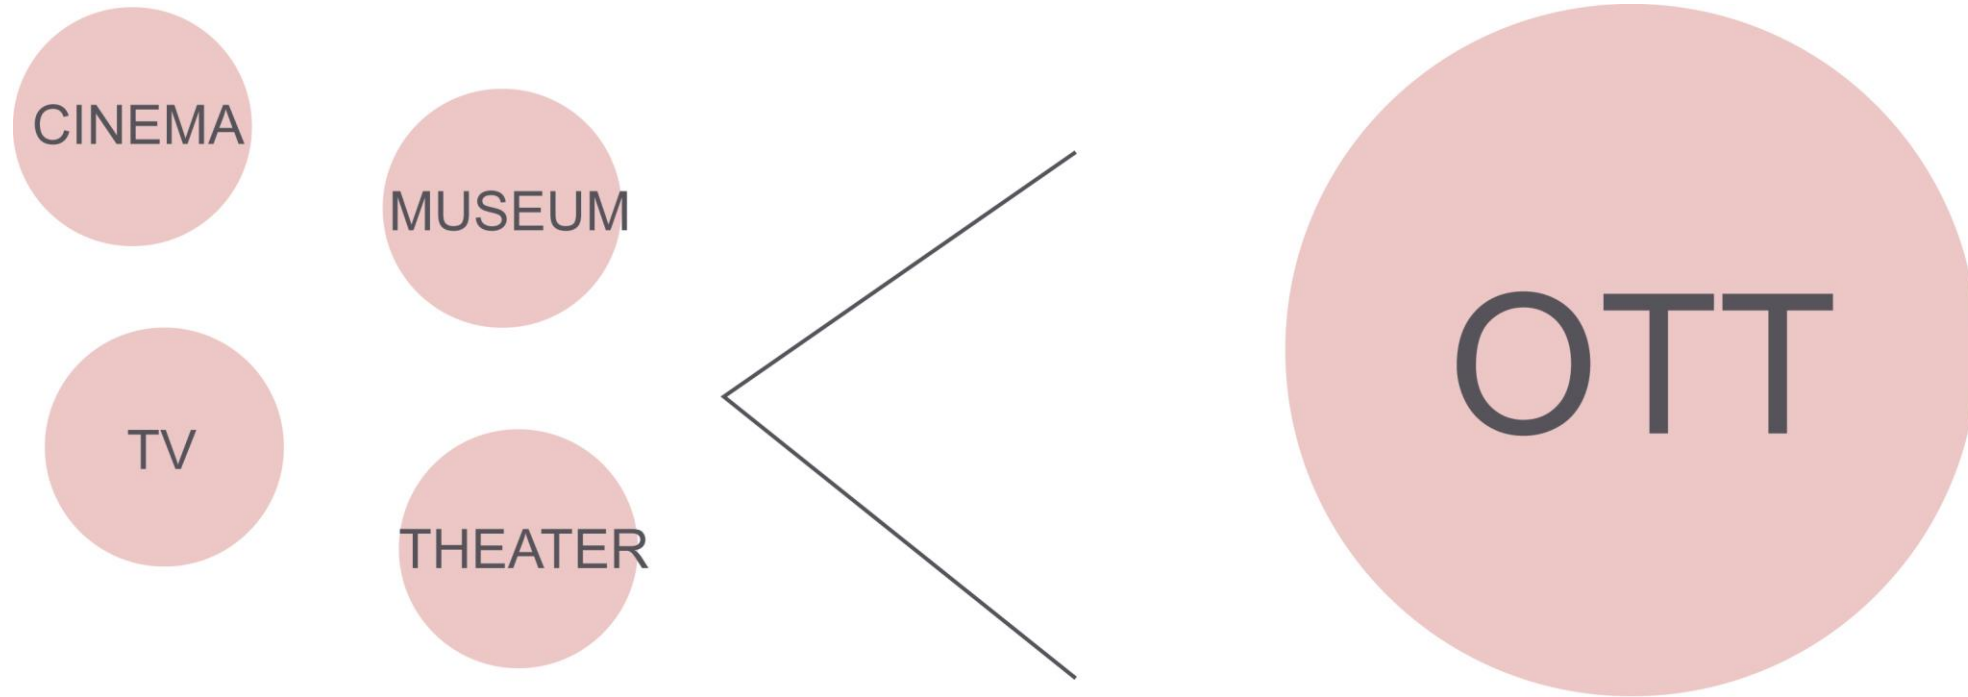

Concept

-> 2nd place

Concept

Past: watching TV or visiting theaters,
or cinemas to watch dramas or movies

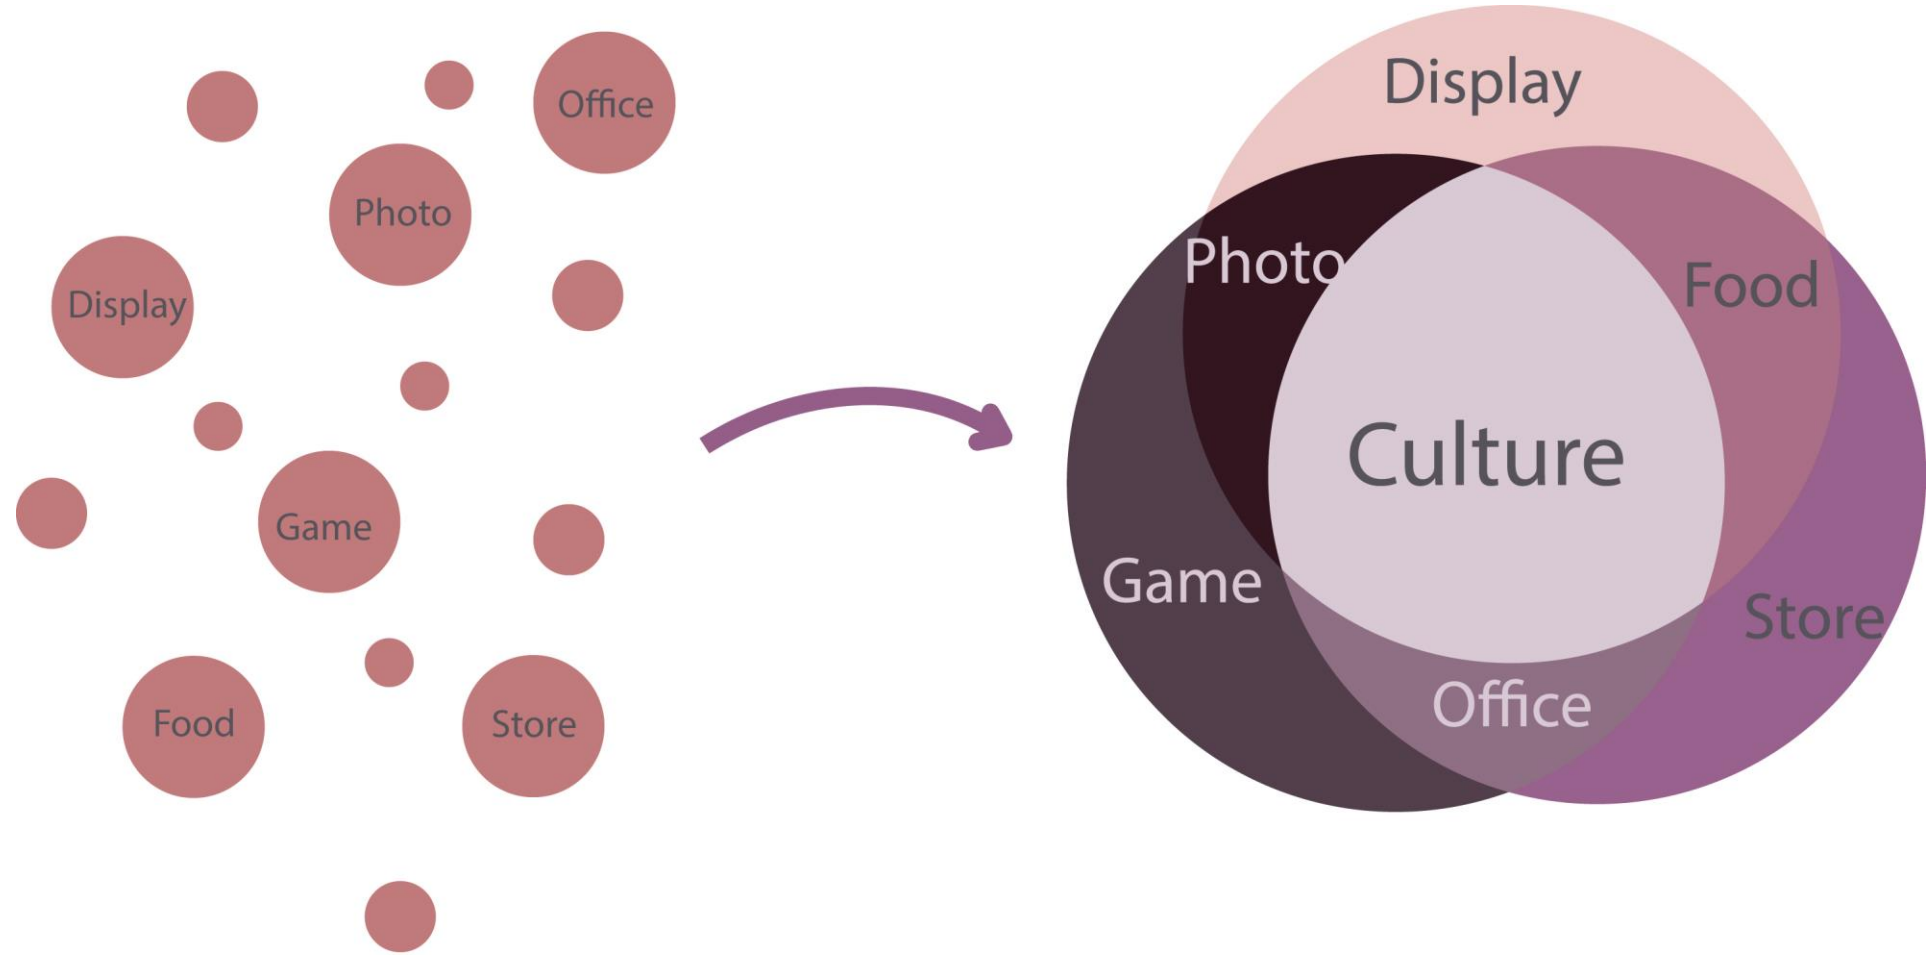

Present: choosing and watching desired content
from anywhere with OTT platforms / Just like the
culture of going to theaters and cinemas, OTT
becoming a cultural phenomenon

Concept

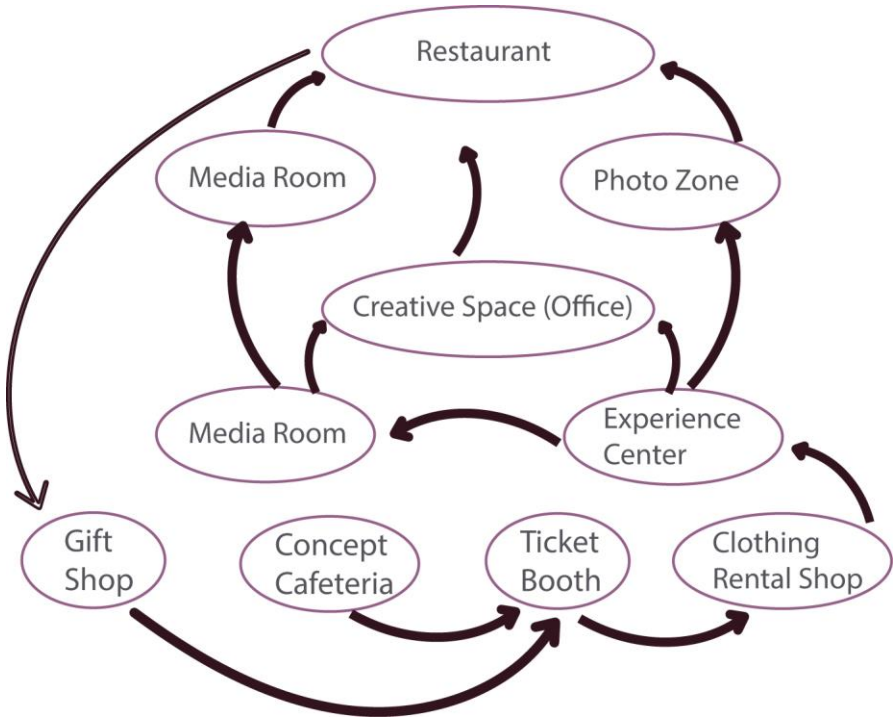

Integrating OTT into the real world rather than limiting it to online experiences

Concept

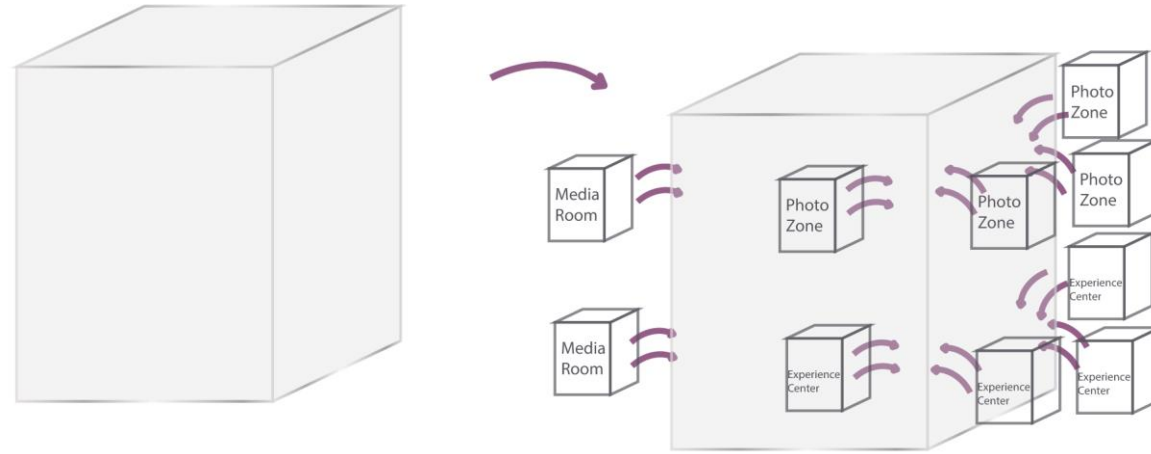

Each activity focused on individually / allowed to enjoy everything in one complex: gaming, shopping, food, photography, and office spaces

Program

Design Concept

Various solid masses, such as photo zones, media rooms, and experience halls, are embedded into a single glass mass
